SHEEP AND BEEF ON-FARM INFLATION 2019-20

Paper No. P20011 | ISSN 2230-5777 | June 2020

1. On-farm inflation	1
2. Annual changes in farm input prices	3
3. Underlying on-farm inflation	5
4. Methodology and sources.....	7
5. Appendices	8

The sheep and beef on-farm inflation report indicates the annual changes in farm input prices and not the annual changes in total farm expenditure. On-farm inflation is different to total farm expenditure, which takes into account the volume of inputs used on farm.

1. On-farm inflation

On-farm inflation +0.4% in 2020

Prices for sheep and beef farm inputs increased 0.4 per cent between March 2019 and March 2020. This compares with a 3.0 per cent increase in the previous 12-month period (see Figure 1).

Of the 16 categories of inputs, prices increased for 12 and decreased for four – Fertiliser, Lime and Seeds; Fuel; Electricity; and Interest. The greatest increase of price was for Insurance, followed by Repairs, Maintenance & Vehicles (see Figure 3).

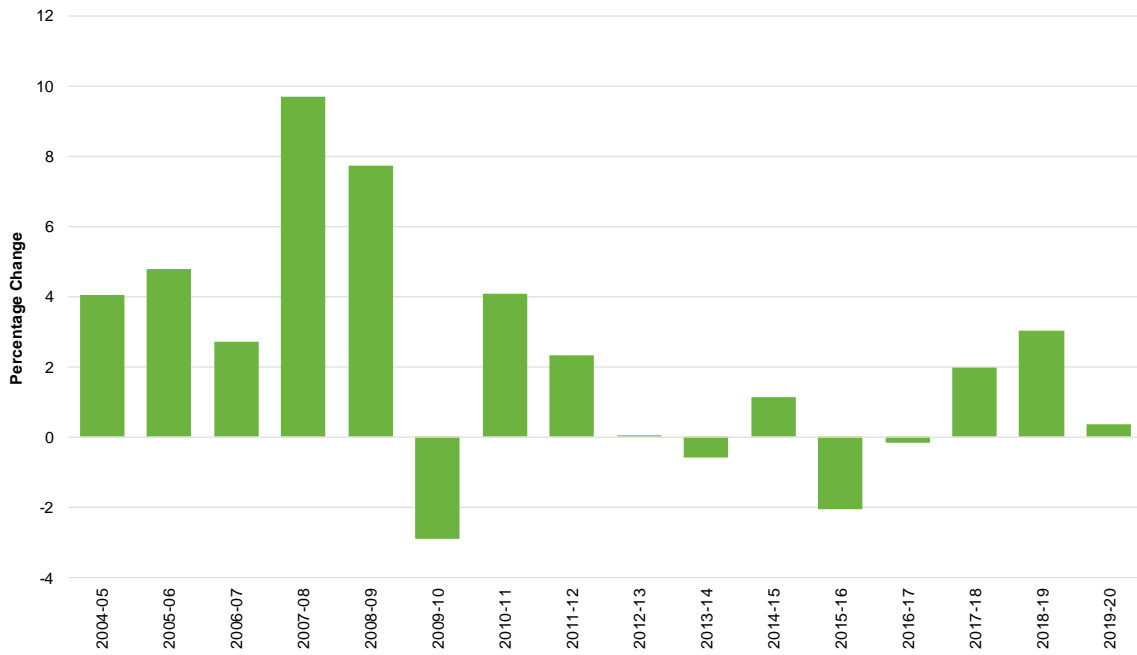

On-farm inflation +3.1% in 5 years +10.4% in 10 years

Prices for sheep and beef farm inputs were up 3.1 per cent over the last five years, and up 10.4 per cent over the last 10 years. See Table 2.

On-farm inflation lower than consumer price inflation in 2020

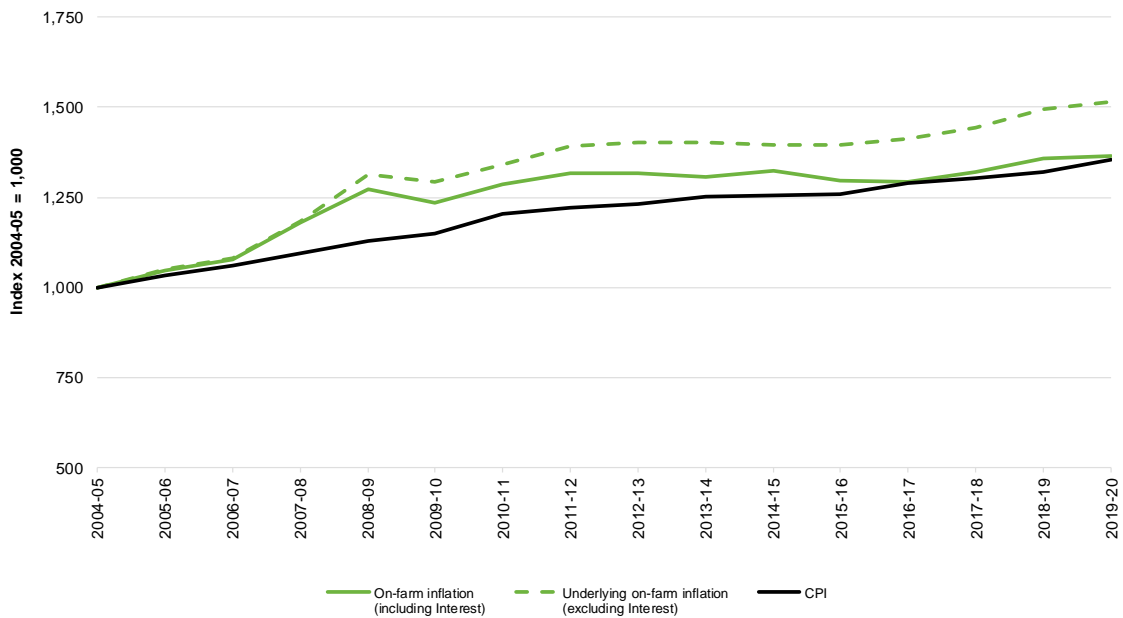

In comparison, on-farm inflation was lower than consumer price inflation in 2020, after exceeding consumer price inflation for the last two years. Consumer prices increased 2.5 per cent between March 2019 and March 2020. Over the last five years, consumer price inflation was 7.9 per cent, and over the last 10 years it was 17.6 per cent. (see Figure 2).

2. Annual changes in farm input prices

Interest -7.2%

Between March 2019 and March 2020, the overall price for Interest expenditure decreased by 7.2 per cent compared to a 0.1 per cent increase reported for the previous 12-month period. This was due to lower interest rates.

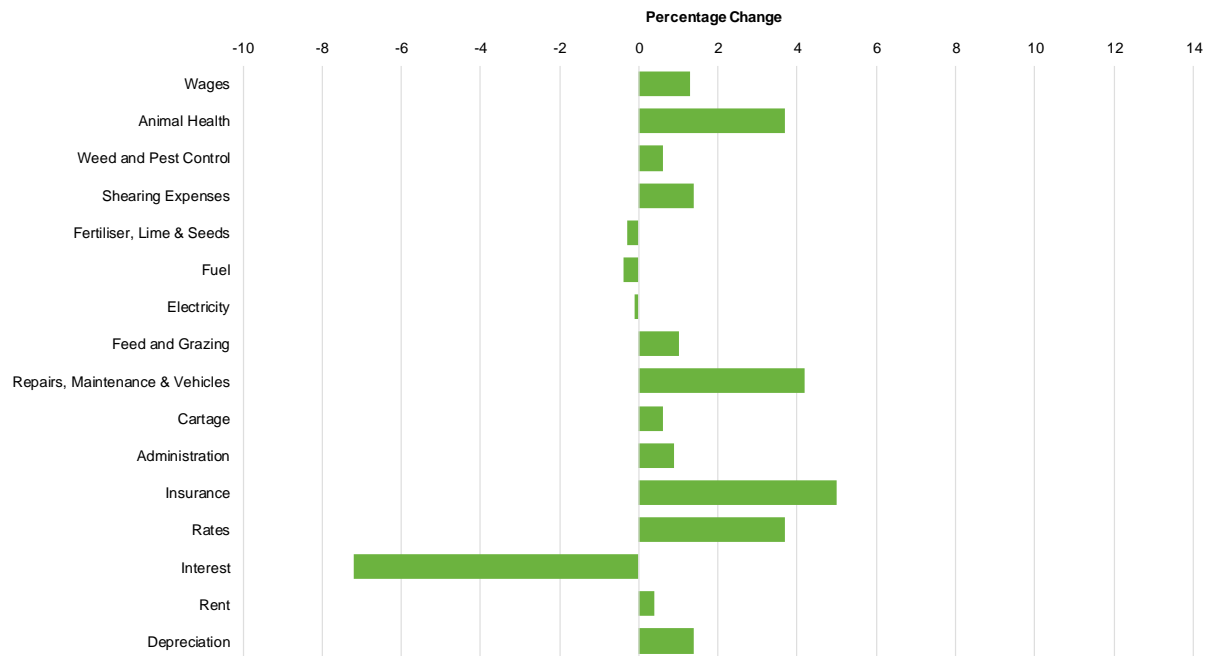

Insurance +5.0%

The price of Insurance continued to increase – by 5.0 per cent in the year to March 2020, up from 4.1 per cent in the previous year.

Repairs, Maintenance & Vehicles +4.2%

Between March 2019 and March 2020, the overall price for Repairs, Maintenance & Vehicles increased 4.2 per cent compared to a 1.4 per cent increase for the previous 12-month period.

Figure 3: Sheep and Beef Farm Input Prices Changes – March 2019 to March 2020

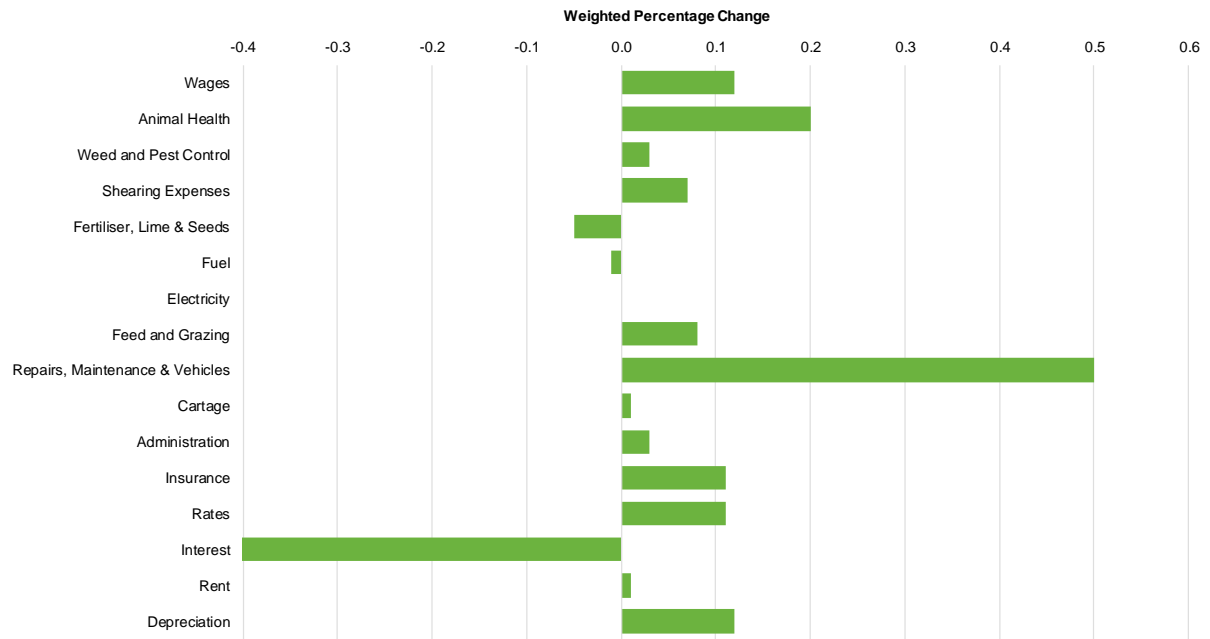

Source: Beef + Lamb New Zealand Economic Service | Statistics New Zealand

The major items of expenditure are Fertiliser, Lime and Seeds; Interest; and Repairs, Maintenance and Vehicles. Together they account for approximately 42 per cent of total farm expenditure and combined the price was down 0.5 per cent.

Figure 3 shows the change in price of each input while Figure 4 shows the change in price of each input weighted by its proportion of total farm expenditure.

The price of Insurance showed the greatest annual change, however its weighting on overall on-farm inflation is low because insurance expenditure is around 2 per cent of farm expenditure. A time-series of the percentage weights of expenditure items is shown in Appendix 4.

Table 1: Sheep and Beef Farm Input Price Changes

Sheep and Beef Farm Input Price Changes March 2019 to March 2020			
Categories of Expenditure	Percentage Change	Percentage Weight ¹	Weighted Percentage Change ²
	Col. 1	Col. 2	Col. 3
Wages	+1.3	9.3	+0.12
Animal Health	+3.7	5.3	+0.20
Weed and Pest Control	+0.6	4.2	+0.03
Shearing Expenses	+1.4	5.0	+0.07
Fertiliser, Lime & Seeds	-0.3	16.9	-0.05
Fuel	-0.4	2.8	-0.01
Electricity	-0.1	0.9	+0.00
Feed and Grazing	+1.0	8.0	+0.08
Repairs, Maintenance & Vehicles	+4.2	11.8	+0.50
Cartage	+0.6	1.7	+0.01
Administration	+0.9	3.4	+0.03
Insurance	+5.0	2.1	+0.11
Rates	+3.7	3.1	+0.11
Interest	-7.2	13.6	-0.98
Rent	+0.4	3.5	+0.01
Depreciation	+1.4	8.4	+0.12
TOTAL		100.0	+0.35

Notes:

1. Average three-year pattern of expenditure for Sheep and Beef Farms (2016-17 to 2018-19p)
2. Col.(3) equals Col.(1) multiplied by Col.(2) divided by 100.
The result is rounded to two decimal places, e.g.
Wages $1.3 \times 9.3 / 100 = 12.09 / 100 = 0.12$

3. Underlying on-farm inflation

Underlying on-farm inflation +1.5%

When excluding interest from the calculation of the change in sheep and beef farm input prices, underlying on-farm inflation was 1.5 per cent in the year to March 2020, less than the previous year, when it was 3.5 per cent.

Table 2 compares on-farm inflation with underlying on-farm inflation for the past 20 years. Underlying on-farm inflation increased at a lower rate than the previous two years.

Table 2: Sheep and Beef On-Farm Inflation

Year	On-farm inflation (including Interest)		Underlying on-farm inflation (excluding Interest)

4. Methodology and sources

The objective in this analysis is to isolate the price changes for the various input categories. An inflation rate (or overall price change) is then derived by weighting the price change for each individual category by its proportion of total farm expenditure. These proportions are based on a three-year moving average.

GST is excluded from the calculation of farm input price changes because this tax is recovered from farm expenditure.

This publication relies heavily on Statistics New Zealand (SNZ) Sheep and Beef Farm Expenses Price Index (FEPI) data. The March quarter data is published by SNZ in May. The SNZ data is published online at www.stats.govt.nz and is provided under the category "Business Price Indexes" (BPI) as downloadable tables.

Beef + Lamb New Zealand Economic Service Sheep and Beef Farm input prices differ from the SNZ data in three areas:

1. Interest charges are calculated independently to take account of both overdraft and mortgage interest rates, including fixed term interest, and are weighted using Beef + Lamb New Zealand Economic Service Sheep and Beef Farm Survey All Classes data.
2. Depreciation is included to measure the price changes for capital replacement. This item correctly lines up the input prices paid index with the on-farm expenditure reported by the Beef + Lamb New Zealand Economic Service Sheep and Beef Farm Survey for All Classes.
3. A three-year moving average of actual on-farm expenditure from the Sheep and Beef Farm Survey is used to weight individual categories to the single overall percentage price change for the year.

Notes:

1. All cost movements are calculated exclusive of GST.
2. Changes are weighted by the average three-year pattern of expenditure on Sheep and Beef farms using the last two final Survey years and the provisional year.
3. Wages includes Managerial Salaries and ACC from 2004-05 onwards.
4. Feed & Grazing includes Feed and Grazing + Cultivation and Sowing + Cash Crop Expenses categories.
5. Irrigation Expenses are not included in the price changes.
